

# FlexPay Merchant Account

This article applies to:

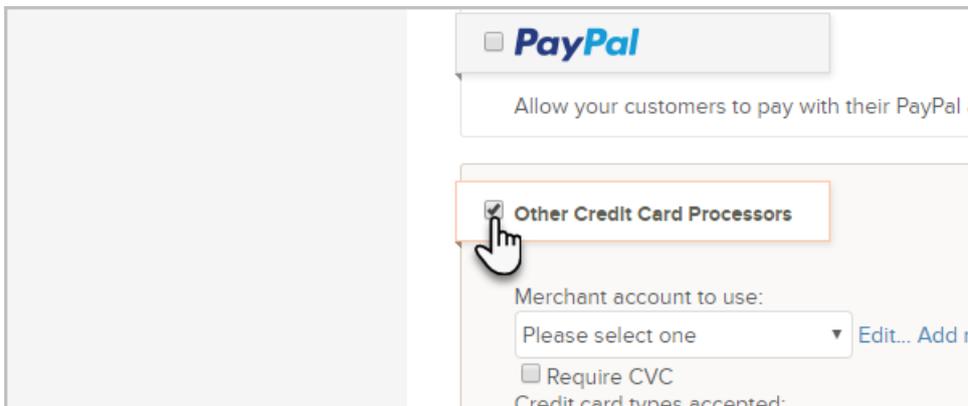

This payment processor will not be directly supported on December 1, 2020. You may choose to use this payment processor by connecting through [Nexus Merchants](#), or connect to any of our [preferred processors](#).

FlexPay helps to mitigate credit card declines by using AI-Driven machine learning to figure out the best time, transit, and testing process to handle your transactions. It acts as a bridge between Keap and over [100 supported payment processors](#).

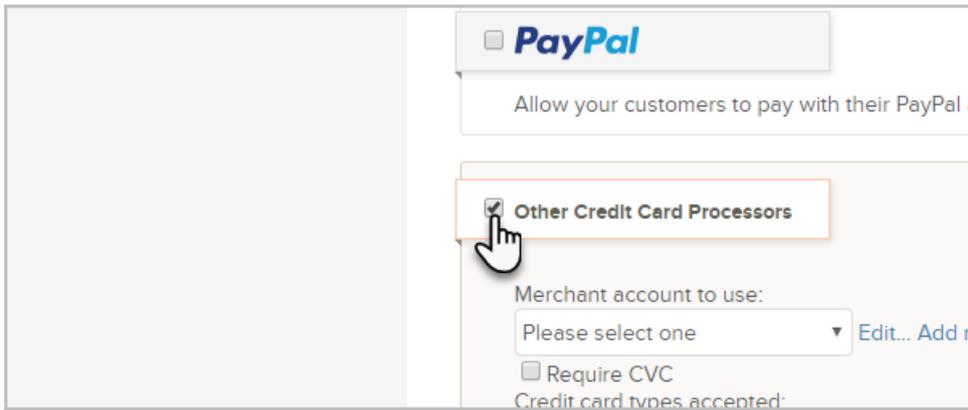

1. Sign up for a [FlexPay](#) account
2. Once you have your account set up, you'll need to [generate an API key](#).
3. Sign in to your Keap account and go to **E-Commerce > E-Commerce Setup > Payment processing**

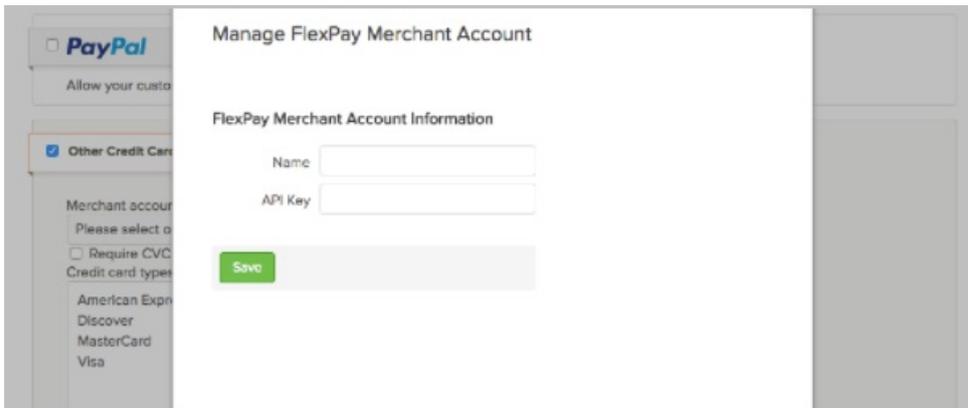

4. Check the **Other Credit Card Processors** checkbox

5. Click **Add new...** and select **FlexPay Merchant Account** from the list

6. Give it an internal name (e.g., "FlexPay"), enter your API key and click **Save**.

7. It's recommended to check out [this article](#) and go over the default billing settings before you start charging cards.
