

# OAuth Authentication

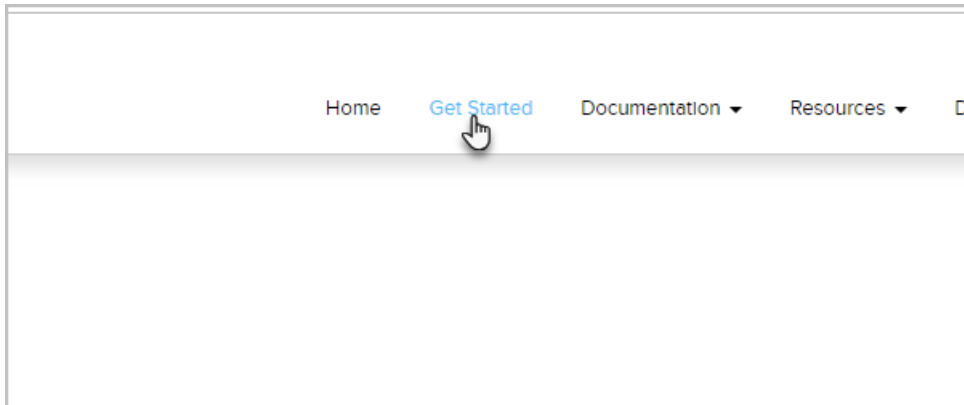

Developers use this OAuth process for API integrations.

**Jan 5, 2020 Update:** Please note that we recently migrated our API Proxy provider from Mashery to Apigee. Please check out these API community posts for FAQs and to ask questions to our API developers: [Apigee Migration FAQ](#) and [Apigee Migration Update](#).

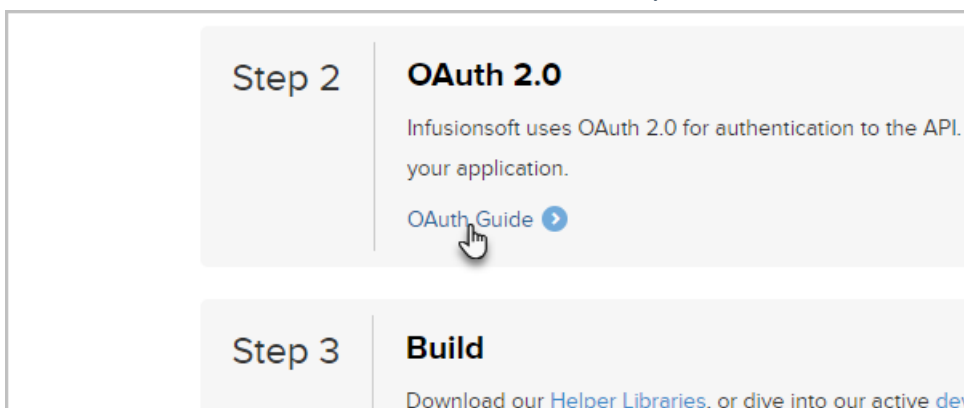

1. Create an account on [developer.infusionsoft.com](https://developer.infusionsoft.com).

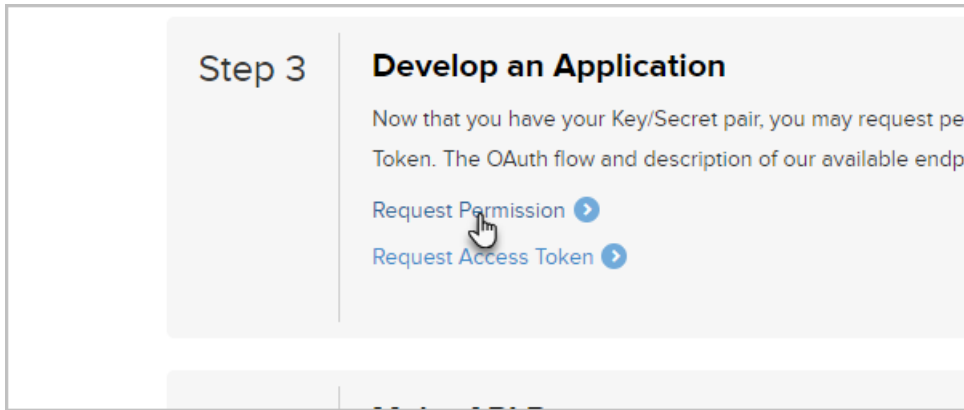

2. Login to the **developer account** and click **Get Started**.

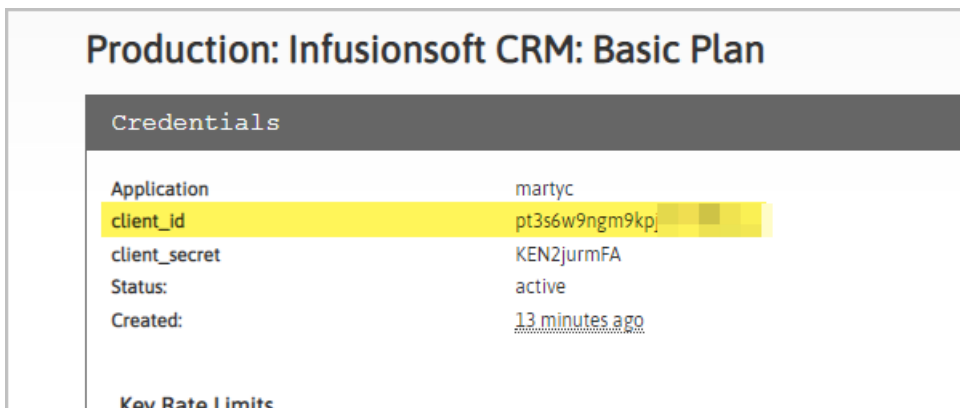

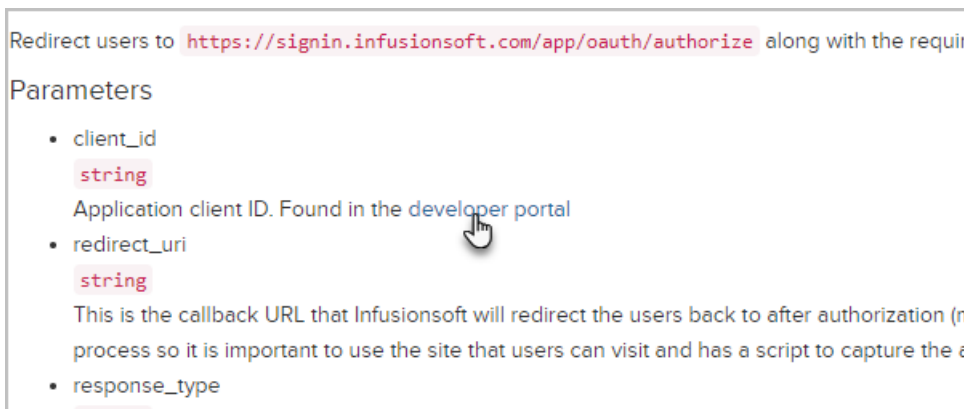

3. Scroll down and click on **OAuth Guide** under **OAuth 2.0 Step 2**.

4. Under **Step 3** click **Request Permission**.

5. Copy this link, <https://signin.infusionsoft.com/app/oauth/authorize> and add the client ID string to the end of the link. The client id can be found by clicking on the developer portal link.

The URL will look like:

[https://signin.infusionsoft.com/app/oauth/authorize/client\\_id=pt3s6w9ngm9kpkj7xxxxxxx](https://signin.infusionsoft.com/app/oauth/authorize/client_id=pt3s6w9ngm9kpkj7xxxxxxx).

Note that client ID is located on their developer accounts page.

- o Ensure that the you are logged in to the application. You will be taken to your Account Central.

6. Click **API Access** located on the right of Account central.

API Access	>
API Access	>
API Access	>

7. Paste your Client ID and Client secret which are located in your developers account page (shown above).
