Web Forms update: Web Forms are now responsive

With the latest update, Web Forms are now responsive. That means you can share it with confidence, knowing that no matter the device or platform, your visitors will see your page as intended. [Learn more.](#)

Note: Previously published web forms embedded via Javascript need to be republished in the Campaign Builder to become responsive. Web forms embedded via HTML need to be republished in the Campaign Builder and the embed code on your site needs to be updated in order for the form to become responsive.

Bug Fixes

- Drop down menu items didn't display in alphabetical order.
 - The Email Open goal in Campaign Builder wasn't triggered until the campaign was published a second time.
 - Some subscription product orders were created with null products instead of the correct product when a large number of contacts triggered the Create Order goal simultaneously.
-
