

Campaign Sequence - Add to sequence

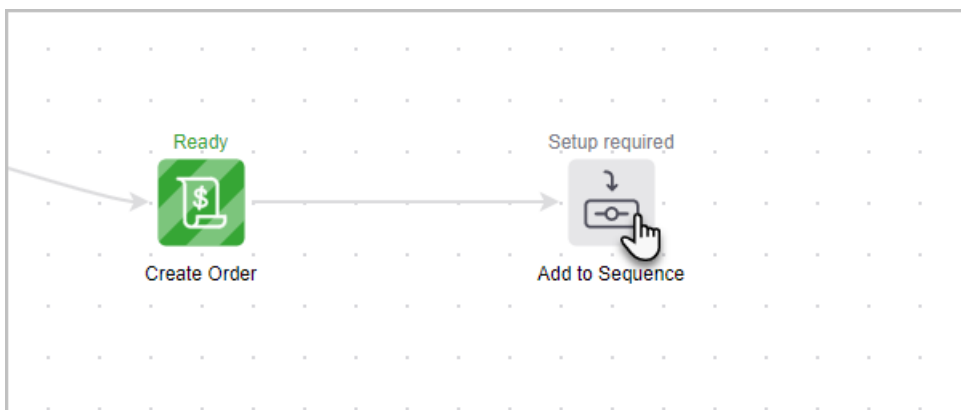

With the Add to sequence option, you can drop a contact into an automation and let them skip the line. Instead of making a contact start from the beginning, you can now add them to a sequence further ahead in the automation.

Add contacts to another sequence

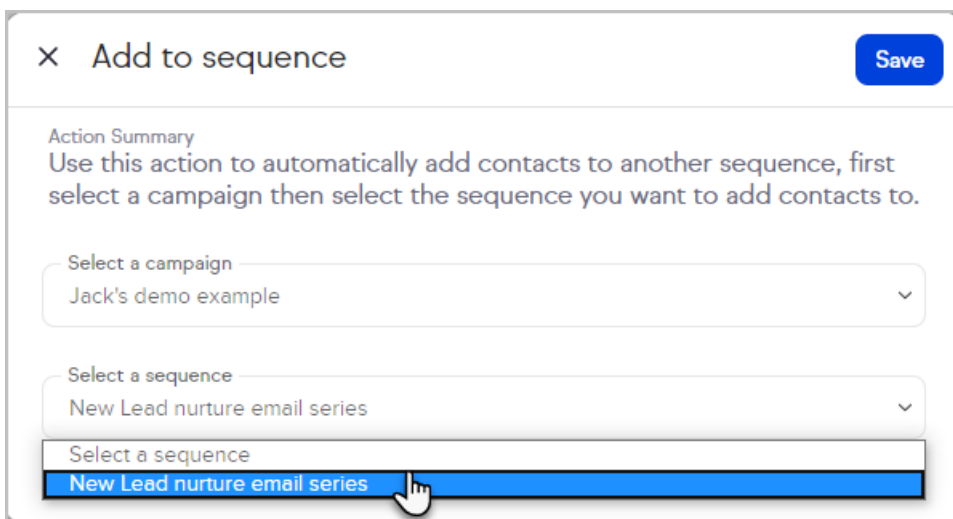

1. Drag the **Add to sequence** process onto the canvas

2. Double click the **Add to sequence** icon

3. Select a campaign and sequence to add the contacts to

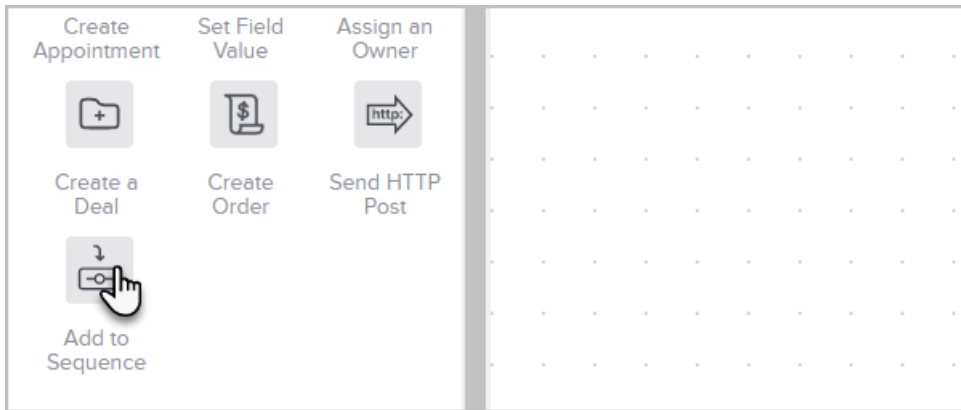

Remove from sequence

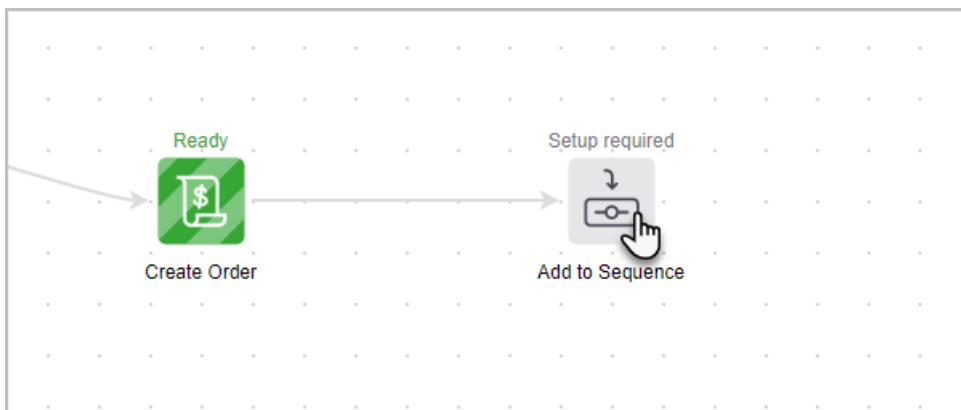

The Add to sequence process can also be used to remove a contact from a sequence.

Contacts do not have to be added to another sequence in order to use this feature. If no campaign and sequence are selected, the only result of the process will be removing contacts from the sequence.

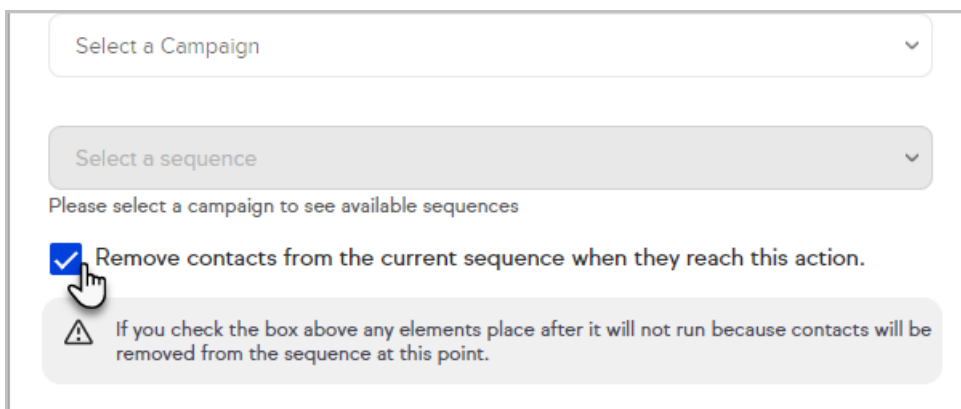

1. Drag the **Add to sequence** process onto the canvas

2. Double click the **Add to sequence** icon

3. Click **Remove contacts...**

A screenshot of a configuration panel. At the top, there is a dropdown menu labeled 'Select a Campaign'. Below it is another dropdown menu labeled 'Select a sequence'. Underneath these is the text 'Please select a campaign to see available sequences'. There is a checked checkbox with the label 'Remove contacts from the current sequence when they reach this action.' A hand cursor is clicking on the checkbox. At the bottom, there is a warning icon and the text 'If you check the box above any elements place after it will not run because contacts will be removed from the sequence at this point.'
