Bug fixes

- When a contact record was updated by an REST API call and the company and birthday fields were not included in the request, those fields were being erased. (Known Issue 2312318)
- Campaigns installed from the Keap Marketplace that contained "Set Field Value" processes defaulted to "override existing field value" instead of retaining the published campaign's setting.
- In Firefox, the Shopping Cart's "Place Order" button did not submit the order.
