## XML-RPC API update: ContactNotes field truncated when over 10,000 characters

As of Aug 18, 2021, any contactNotes stored via Keap's XML-RPC API that are longer than 10,000 characters will now be truncated down to 10,000 characters. If you are using our XML-RPC API to store contactNotes, we recommend ensuring you are not attempting to store contact notes beyond this limit.

## Bug fixes

- Required checklist items were sometimes duplicated on opportunities when those opportunities were created by a campaign.
  - After updating which links triggered a link click goal, the goal would switch to "Not ready".
  - After importing contacts, the option to "Send an Email Broadcast to these contacts" did not work.
-
